NARDI ITALIA

During 70 years of experience in creating sporting steering wheels, Nardi has built itself a reputation second to none as a producer of prestigious and highly desirable models, designed and supplied not only to the world's car maker leaders, but even more significantly to the most exacting driving and tuning enthusiasts.

Considerable investments have been made by the company particularly in the recent years in order to ensure and consolidate its leadership in terms of high quality standards as well as to promptly answer and even anticipate new trends either in terms of design and manufacture: result of an extensive process of research and knowledge performed by Nardi's designers and engineers, who are able to optimize and harmonize the combination of styling with material innovation with the personality and styling characteristics of automobiles.

The whole obtained by employing materials and production processes with the lowest possible environmental impact.

The use of 3-D CAD design technology and CAE engineering simulation and the availability of comprehensive in-house testing facilities guarantees that all products meet the highest requirements in terms of passive safety, durability and quality.

Notwithstanding all this, Nardi production is still performed following a traditional process where almost every single product is an hand-crafted masterpiece adding a touch of distinction to the driving enthusiasts.
